enriching database models so as to allow the user to deal with fuzzy and uncertain information has been of scientists concern for years this resulted in numerous contributions mainly with respect to the popular

relational model or to some related form of it the experience was instructive although still far from concrete applications the time has come that the advantages of object oriented databases are acknowledged outside the research and academic worlds and a breakthrough of new commercial softwares is observed lately research has been devoted to the endowment of this type of databases with more real world reflecting semantics it proved that the object oriented paradigm lends itself extremely well to it this is very promising and opens new perspectives for the availability of new generation database products in the near future the book presents the latest research results in dealing with fuzziness and uncertainty in object oriented databases

in this book the authors present an alternative set theory dealing with a more relaxed notion of infiniteness called finitely supported mathematics fsm it has strong connections to the fraenkel mostowski fm permutative model of zermelo fraenkel zf set theory with atoms and to the theory of generalized nominal sets more exactly fsm is zf mathematics rephrased in terms of finitely supported structures where the set of atoms is infinite not necessarily countable as for nominal sets in fsm sets are replaced either by invariant sets sets endowed with some group actions satisfying a finite support requirement or by finitely supported sets finitely supported elements in the powerset of an invariant set it is a theory of invariant algebraic structures in which infinite algebraic structures are characterized by using their finite supports after explaining the motivation for using invariant sets in the experimental sciences as well as the connections with the nominal approach admissible sets and gandy machines chapter 1 the authors present in chapter 2 the basics of invariant sets and show that the principles of constructing fsm have historical roots both in the definition of tarski logical notions and in the erlangen program of klein for the classification of various geometries according to invariants under suitable groups of transformations furthermore the consistency of various choice principles is analyzed in fsm chapter 3 examines whether it is possible to obtain valid results by replacing the notion of infinite sets with the notion of invariant sets in the classical zf results the authors present techniques for reformulating zf properties of algebraic structures in fsm in chapter 4 they generalize fm set theory by providing a new set of axioms inspired by

the theory of amorphous sets and so defining the extended fraenkel mostowski efm set theory in chapter 5 they define fsm semantics for certain process calculi e g fusion calculus and emphasize the links to the nominal techniques used in computer science they demonstrate a complete equivalence between the new fsm semantics defined by using binding operators instead of side conditions for presenting the transition rules and the known semantics of these process calculi the book is useful for researchers and graduate students in computer science and mathematics particularly those engaged with logic and set theory
